

INFORMATION BULLETIN

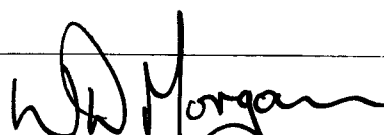

Serial No. 008

Aircraft Type T67 (See below)

TITLE
OPTIONAL MODIFICATIONS

The following modifications have been introduced on the latest T67 aircraft and are highly recommended as optional extras.

Mod No.	Aircraft	
M158	T67B & MM	Installation of special bolt in lieu of socket hd cap screw, nosewheel steering rod, at nose u/c pivot point. This mod will lessen the possibility of damage to the lower compression member of the engine mtg frame in the event of a heavy landing.
M184	T67B & M	Centre consoles modification. Improved design to prevent foreign object damage and to reduce draughts around trim tab wheel area.
M189	All T67 Series	Addition of spring washer to trim tab wheel to increase friction.
M203	T67D, M, & M200	Introduction of Acetal bush onto forward console for fuel selector valve tube protection. This mod provides a measure of wear resistance to the fuel selector valve tube where it passes through the forward console by bushing the existing holes.
M206	T67B, C, D M & M200	Introduction of class one locking on engine frame to Frame 1 attachment bolts. This is achieved by inserting a plug into mounting frame foot pad to mate with existing socket in bolt. This plug is then wirelocked to the engine frame.
